Ship Thesis: SEO, AEO and GEO Fix Plan

Nov 7, 2026 · @Aditya

Summary

shipthesis.com has strong on-page SEO and answer-first content, but LLMs cannot yet verify who runs the studio, so GEO is the weak spot at 4/10.

Dimension	Score	Why
SEO	7/10	Clean titles, descriptions and canonicals on every page. Social previews are broken in places, the blog has 3 posts, and the sitemap is unchecked.
AEO	7/10	Blog posts open with a direct answer, a TL;DR, a table and question headings; four service pages have real FAQs. No pricing numbers, and case-study headings are opaque.
GEO	4/10	No named person, no off-site presence, facts that contradict each other, and claims with no proof.

This is based on 10 pages crawled on 7 Nov 2026: the homepage, 3 case studies, 4 service pages, the blog index and 2 posts. Schema markup, robots.txt, the sitemap and llms.txt could not be checked (last section).

What is already working

- Every page has a unique title, meta description and canonical.
- Service pages say who the studio is for and who it is not for. LLMs use this to decide whom to recommend you to.
- Case studies carry real numbers: 175 column variants matched, 7.5x faster video playback, 230 automated tests.
- The blog format (answer first, TL;DR, table, FAQ, last-updated date) is the one AI engines quote most easily.

Audit findings and fixes

Fourteen issues, ordered by how much they affect whether LLMs recommend you. Most are text edits you can make in under an hour each.

#	Priority	Issue found	Fix	Effort
1	High	No named person. Blog author is "Ship Thesis Studio", there is no About page, and the FAQ promises "the person who builds it" without naming them.	Add a founder block to the homepage and a byline (name, photo, one-line bio, LinkedIn) to every post and case study.	Low
2	High	No off-site entity. The footer has no social, GitHub or review links, and a search for "Ship Thesis mobile app SaaS agency" did not return your site.	Complete the profiles in the off-site section and link them from the footer.	Medium
3	High	Facts contradict each other. Poststeady is "4 weeks" on the homepage and AI page but "11 weeks" on its case study. It is "Live since September 2026" while EHS says "May 2026". The pages say Poststeady uses Stripe.	Pick one true version of each fact and update every page. Confirm the payment provider named matches what you run.	Low
4	High	Unverified claims on the Flutter page: "10,000+ verified students", "0 ms recovery data loss", "100% App Store approval". None appear in the Assess Yourself case study. "App Store approval guarantee" is a promise you cannot fully control.	Back each claim with a source on the case study, or delete it. Replace the guarantee with what you actually commit to.	Low
5	High	The only testimonial is from a user of your own product, and the name "Claude Bernard" matches a famous historical figure.	Replace it with a real, named client quote linked to a profile, or remove it. Add no review schema until the review is real.	Low

#	Priority	Issue found	Fix	Effort
6	High	No pricing numbers. "How much does it cost?" is answered with "scoped first". This is the question buyers ask LLMs most.	Publish "from" price ranges and what moves the price (see the content plan).	Low
7	Medium	Two booking links: `cal.com/shipthesis/20min` on the homepage and `cal.com/aditya-kumar-singh/20min` on the service pages and Poststeady case study. A personal name that appears nowhere else confuses entity matching.	Use one link everywhere.	Low
8	Medium	Social previews: no og:image or og:type on the Flutter and SaaS pages; the blog index reuses the homepage's Twitter title and description; case-study og:images are 699x265 and 779x320.	Add a unique 1200x630 image per page and unique Twitter tags.	Low
9	Medium	Only 3 blog posts, all dated 2 Nov 2026. Too thin to show topical depth.	Follow the content plan: 10 to 15 posts over 2 to 3 months.	High
10	Medium	No /work or /about page. Navigation uses #anchors on one page. "UX / UI Design" and "App Maintenance" in the footer link to #services.	Add /work and /about. Give design and maintenance their own pages or remove them from the footer.	Medium
11	Medium	Case-study headings are clever but opaque: "175 ways to say Spend", "The fact-check desk", "Under the hood". LLMs retrieve by heading.	Keep the creative line as a small label above, and make the H2 plain: "How Poststeady maps 175 CSV column names to one metric".	Low
12	Low	Footer differs by page: the Flutter and SaaS footers omit the MVP and AI Product links.	Use one shared footer component.	Low

#	Priority	Issue found	Fix	Effort
13	Low	Location is vague. "Working remotely worldwide", "We work remotely from India" and "for US founders" appear on different pages.	One line everywhere, for example: "Studio based in India, working in US time zones".	Low
14	Low	The Flutter meta description is about 168 characters and will truncate in results.	Trim to 160 or fewer.	Low

Build an entity LLMs can recognise

An LLM recommends a studio when it can say who it is, what it does, and where that is confirmed. Your site says what you do well. This section fixes the first and third.

Choose one: named founder or studio-only. A named founder is the stronger signal, because a name links your site to a LinkedIn profile, a GitHub account and reviews. A studio-only brand works too, but then the off-site profiles carry all the verification, so do them first.

One description, used everywhere

Use this exact sentence on the homepage, About page, LinkedIn, Upwork, Fiverr, Clutch, GitHub and Product Hunt, so models see one consistent entity:

> Ship Thesis is a fixed-price Flutter and Next.js studio that builds mobile apps and SaaS MVPs for founders, with a working build every week and 100% code ownership for the client.

Founder block (homepage, above the footer, and a short About page)

- Name, photo, role
- Two sentences: what you have built (Assess Yourself, EHS Training Platform, Poststeady) and how long you have been building
- LinkedIn and GitHub links
- The sentence "You talk directly to the person who builds your product", now backed by a name

Organization and Person markup. Put this JSON-LD on the homepage and /about. Replace everything in [brackets] with real values and delete any `sameAs` line you do not have yet. If you stay studio-only, drop the Person block and the `founder` line.

```
{
  "@context": "https://schema.org",

        "[Your GitHub URL]"
      ]
    }
  ]
}
```

Fix the name collisions. Several unrelated products use "Ship" names (ShipFast, Shipper, ShipAI). Always write "Ship Thesis" in full, followed by what you do, and never "Ship" alone. If you ever published under the name Ship Theories, add "formerly Ship Theories" to the About page and 301 any old URLs to the new site.

Fix the two booking links (finding 7) so the only person-like identifier on the site is the one you choose to show.

Content plan

Publish one page for every question a founder would ask an LLM before hiring a studio, and answer it in the first 50 words. Start with the pricing page, because it is the biggest gap.

Page format to repeat on every page and post

1. H1 written as the question, with a 40 to 60 word direct answer right under it.
2. A "short version" list of 3 bullets.
3. One comparison table with real numbers.
4. Section headings phrased as questions.
5. A short FAQ (3 to 5 questions) marked up with FAQPage schema.
6. A "who this is not for" note, as you already do on service pages.
7. Byline with the author's name and "Last updated" date, plus one link to the matching service page and one to a case study.

Pages and posts to write

Order	Title (as the question)	Why it matters	Draws on
1	How much does it cost to build an MVP app?	The top buyer question; fixes finding 6	Your milestone model: 30% / 40% / 30%
2	Flutter vs React Native for a startup MVP	A common LLM comparison query	Flutter page, Assess Yourself
3	Should you hire an agency or a freelancer to build your MVP?	Comparison query where you can state your fit	MVP page "not for" list

Order	Title (as the question)	Why it matters	Draws on
4	How long does it take to build an MVP app?	Direct question; your pages only say "weeks"	Case-study timelines (after fixing the 4 vs 11 week conflict)
5	What to ask before hiring a software agency	Checklist posts get cited	Milestone and code-ownership posts
6	How much does a Flutter app cost?	Price query	Pricing page
7	How to build an offline-first mobile app	Technical query you have a proven case for	Assess Yourself
8	How to add AI summaries to reports without wrong numbers	Niche where you have a case study	Poststeady, AI Product page
9	How to replace an off-the-shelf LMS with a custom platform	Buyer-intent query	EHS Training Platform
10	How to publish a Flutter app to the App Store and Google Play	High-volume how-to	App Store submission step

Pricing page contents. Three or four "from" ranges (for example mobile MVP, SaaS MVP, AI feature), what drives the price (screens, integrations, payments, offline sync), what is included (design, store submission, 30-day warranty) and the 30/40/30 payment terms. Put the same figures in the "at a glance" block on the homepage and in the FAQ answers, so every page agrees.

Other pages to add

- /about with the founder block and the description sentence
- /work as an index of all case studies (ChromaLayer is already linked as the "next project" from Poststeady but absent from the homepage list)
- A short page each for maintenance and for UX/UI design, or remove them from the footer

Rewrite every case study's headings to plain, searchable H2s, and add one "Results" line near the top that states the outcome in a sentence an LLM can quote.

Off-site presence

LLMs lean on sources other than your own site to decide whether to trust you, so each profile below is a second place that confirms who you are. Do them in this order.

Order	Where	What to do	Why it helps
1	LinkedIn (you and a company page)	Use the one-line description, link to the site, list the three projects	Most-linked identity source for a person or studio
2	Poststeady.com	Add "Built by Ship Thesis" with a link in the footer	Ties your own product to your studio entity
3	Upwork and Fiverr	Make the agency description match the one-line description exactly and link the site	You already have these profiles; they are indexed and consistent facts
4	GitHub organization	Name it Ship Thesis, add a README with the description, and pin any public repos you can share	Developer credibility signal
5	Clutch	Create a profile and ask EHS Guru and Aptellic each for a review	Review platforms are often cited in agency recommendations
6	Client quotes	Ask both clients for a named quote and a LinkedIn recommendation; show them on the site	Fixes the testimonial gap (finding 5)
7	Product Hunt	Launch Poststeady, listing yourself as maker with a Ship Thesis link	Third-party mention with a backlink
8	Indie Hackers	Create a profile and post the Poststeady build story	Founder-audience mention
9	dev.to or Medium	Republish each case study with the canonical link set to your own page	Extra indexed copies that point back to you

Order	Where	What to do	Why it helps
10	Reddit (r/FlutterDev, r/startups, r/SaaS)	Answer real questions with specifics; link only when it genuinely helps	Models read Reddit answers; spam gets removed

Rules for all of them

- Same name ("Ship Thesis"), same description, same website URL, same email.
- Never claim results you cannot prove on your own site.
- Ask for reviews from real clients only. Never buy or write them yourself.

Technical setup

The site is built on Next.js, so the content is likely server-rendered and readable by crawlers. These steps make sure nothing blocks them and that every page is easy to index.

1. robots.txt. The simplest safe file allows everything and points to the sitemap. Only add rules for AI crawlers (GPTBot, OAI-SearchBot, ClaudeBot, PerplexityBot, Google-Extended) if your current file blocks them, because blocking them keeps you out of AI answers.

```
User-agent: *
Allow: /

Sitemap: https://www.shipthesis.com/sitemap.xml
```

2. Sitemap. Include every page: homepage, /about, /work, all case studies, all four service pages, /pricing, the blog index and every post, each with a `lastmod` date that changes only when the page really changes.

3. Search Console and Bing. Verify the domain in Google Search Console and Bing Webmaster Tools, submit the sitemap, and request indexing for the new pages. Bing's index feeds several AI search tools, so do not skip it.

4. Structured data by page type

Page	Schema to add
Every page	Organization (see the entity section) and BreadcrumbList
Service pages	Service, plus FAQPage for the FAQ block
Blog posts and case studies	Article with author (Person), datePublished, dateModified
Pages with an FAQ	FAQPage, matching the visible text exactly
Testimonials	Add Review schema only once the review is real and linked

Validate each page type once in the Rich Results Test and the Schema.org validator.

5. Social previews. Give every page its own 1200x630 og:image and set og:type, og:title and the Twitter tags separately per page (finding 8).

6. llms.txt (optional, low effort). It is a proposed convention, not a standard, and the evidence that it improves AI visibility is thin, so treat it as a ten-minute extra after everything above. Save it as `/llms.txt`:

```
# Ship Thesis

> Ship Thesis is a fixed-price Flutter and Next.js studio that builds mobile
apps and SaaS MVPs for founders, with a working build every week and 100%
code ownership for the client.

## Services
- [MVP development](https://www.shipthesis.com/mvp-development): fixed price,
milestone payments, weekly builds
- [Flutter app development](https://www.shipthesis.com/flutter-app-
development): iOS and Android from one codebase, offline-first
- [SaaS development](https://www.shipthesis.com/saas-development): Next.js
and Supabase web products
- [AI product development](https://www.shipthesis.com/ai-product-
development): document and reporting features with checked numbers

## Work
- [EHS Training Platform](https://www.shipthesis.com/work/safety-training-
platform)
- [Poststeady](https://www.shipthesis.com/work/poststeady)
- [Assess Yourself](https://www.shipthesis.com/work/assess-yourself)

## Guides
- [How milestone payments work](https://www.shipthesis.com/blog/how-
milestone-payments-work)
- [How to ensure code ownership](https://www.shipthesis.com/blog/code-
ownership-hiring-agency)
- [What to cut from your first MVP](https://www.shipthesis.com/blog/what-to-
cut-from-v1-mvp)
```

7. Speed and rendering. Run the homepage and one case study through PageSpeed Insights. Fix any red Core Web Vitals; the case studies load very large images (`w=3840`), which is worth checking.

Measuring LLM visibility

Run the same 10 prompts in ChatGPT, Claude and Perplexity every two weeks and record whether Ship Thesis is named. Without a fixed set you cannot tell whether anything you changed worked.

#	Prompt to ask	Page it should lead to
1	Best agency to build a Flutter MVP for a US startup	/flutter-app-development
2	Fixed-price MVP development agencies for founders	/mvp-development
3	How much does it cost to build an MVP app?	/pricing
4	Agency that gives me 100% code ownership from day one	Code-ownership post
5	How do milestone payments work with a software agency?	Milestone-payments post
6	Who can build an offline-first mobile app?	Assess Yourself case study
7	Custom alternative to an off-the-shelf LMS	EHS Training Platform
8	Who builds SaaS products with Next.js and Supabase for startups?	/saas-development
9	Tools that turn analytics CSV exports into client reports	Poststeady
10	What is Ship Thesis?	Homepage and /about

For each run, log the date, the tool, the prompt, whether you were named, which URL was cited, and which competitors appeared. Prompt 10 is the first one to pass, because it only needs the entity to exist. Prompts 1 and 2 are the hardest, because they compete with established agencies.

What to expect. AI tools update from indexed pages and third-party sources, so movement follows indexing and new off-site mentions. Plan for months rather than weeks, and judge progress by the trend across runs, not a single answer. Also track Google Search Console impressions for the question-style pages, since they are the quickest early sign.

30/60/90 day action plan

Everything here can be done by you, without outside help. Days 1 to 30 fix trust and consistency on the site you already have; days 31 to 60 build the entity off-site; days 61 to 90 build content depth.

Days 1 to 30: fix the site

- [ ] Decide: named founder or studio-only, then write the one-line description
- [ ] Fix the contradicting facts: Poststeady timeline and launch date, payment provider named (finding 3)
- [ ] Remove or prove the Flutter page claims: 10,000+ students, 0 ms data loss, 100% approval, "approval guarantee" (finding 4)
- [ ] Replace the "Claude Bernard" testimonial with a real named quote, or remove it (finding 5)
- [ ] Use one booking link everywhere (finding 7)
- [ ] Add the founder block and bylines with name, photo, bio and LinkedIn
- [ ] Write and publish /pricing with "from" ranges and the 30/40/30 terms
- [ ] Add the Organization (and Person) JSON-LD to the homepage
- [ ] Make the robots.txt, sitemap and llms.txt checks and fixes
- [ ] Verify the site in Google Search Console and Bing Webmaster Tools, and submit the sitemap
- [ ] Run the 10-prompt baseline test and save the results

Days 31 to 60: build the entity off-site

- [ ] Finish LinkedIn, GitHub, Upwork and Fiverr with the identical description
- [ ] Add social and profile links to the footer
- [ ] Add "Built by Ship Thesis" with a link on poststeady.com
- [ ] Create the Clutch profile and ask EHS Guru and Aptellic for named reviews
- [ ] Add /about and /work pages
- [ ] Fix og:image and Twitter tags on every page (finding 8)
- [ ] Rewrite case-study H2s as plain headings with a one-line result (finding 11)
- [ ] Launch Poststeady on Product Hunt and post the build story on Indie Hackers
- [ ] Publish posts 1 to 4 from the content plan
- [ ] Re-run the 10 prompts

Days 61 to 90: build depth

- [ ] Publish posts 5 to 10 from the content plan, one per week
- [ ] Add Article, FAQPage and BreadcrumbList schema to every post and service page
- [ ] Republish two case studies on dev.to or Medium with the canonical set to your page
- [ ] Answer five real questions on Reddit or Indie Hackers with specifics

- [ ] Add pages for maintenance and UX/UI design, or remove them from the footer
- [ ] Run PageSpeed Insights on key pages and fix any red scores
- [ ] Re-run the 10 prompts, compare with the baseline and decide what to double down on

What was not verified

The page fetcher blocked robots.txt, sitemap.xml and llms.txt, and it returns text without the page's script tags, so schema markup was also invisible. Treat the scores as provisional until these are checked.

Item	How to check	Good looks like
Schema markup	Open any page, choose View Source, search for `ld+json`	Organization on every page, Article on posts, FAQPage where FAQs exist
robots.txt	Open `/robots.txt` in a browser	No `Disallow: /` for AI crawlers; a Sitemap line
Sitemap	Open `/sitemap.xml`	Lists every page with accurate lastmod dates
llms.txt	Open `/llms.txt`	Either a valid file or a plain 404 (it is optional)
Core Web Vitals	Run the homepage and one case study through PageSpeed Insights	Green on mobile
Backlinks and authority	Check in Google Search Console links report	Any independent site linking to you
Indexing	Search `site:shipthesis.com` in Google and Bing	All pages listed

The site search finding (that "Ship Thesis mobile app SaaS agency for founders" did not surface your site) came from one search on 7 Nov 2026 and may change as pages get indexed.

Sources

- shipthesis.com pages reviewed: homepage, three case studies, four service pages, blog index and two posts

- AIOSEO: llms.txt vs robots.txt vs XML sitemap: llms.txt is a proposal, not a web standard
